

LEARNING PROGRESS REFLECTION - No. 3 of 4

CREATIVITY

- Since the last time you wrote about your research, what did you learn about your topic?
- What did you learn about yourself and your ability to work with others?
- What does your group want to do to make sure your trifold board background and imagery connects to your universal theme, generalizations, and topic on a deep and symbolic level?
- What artistic or supplemental piece (sculpture, film, performance, interactive element, tech component, painting, mural, etc...) are you planning on doing for your project? Please be sure to draw it in the blank spaces provided for you and write a justification for it.
- In your next steps, what do you need to do to make sure you successfully complete this component of the project? What are some things you need to do?
- How is your collaboration going so far? What is working well and not working well?

I learned that the structure of the brain cannot necessarily be changed. It has to be changed by you working hard on mentally thinking about the part that you want to become better at. For example, if you want to become better at math, then you must study hard at math so the part that solves math for you can expand. I am planning to either do a painting or a sculpture for our creative piece. The way that the sculpture would go, is a soccer ball that has the colors of a brain and it has the structure of the brain showing how you can expand on its structure to in this case become a better athlete. I need to make sure that I know how to present the trifold board properly in front of an audience. I need to study my own words, because maybe I know how to say it face to face now, however in one week I may forget my own words at a more important place. My collaboration is going fine so far, although sometimes I do not stay the full mentorship sessions, I get good progress done on the project as well as my partner.
